eCMSMS

Integrated digital system for compliance, SMS, information security, training and document control for aviation organizations

SafeWings

©eCMSMS by SafeWings Aviation Consulting

A single operating environment for an aviation organization

- Replaces Excel, e-mail, shared folders, and manual registers with a traceable, auditable, role-based controlled system.
- Connects reports, risks, audits, meetings, training, documents, and actions in one operating environment.
- Supports controlled access to information, audit-ready records, and evidence-based oversight.
- Is available in two packages: eCMSMS Core and eCMSMS Integrated.

The action-management backbone

One action register serving multiple management-system processes

- Actions may originate from audits, reports, meetings, projects, documentation, or training.
- Responsible users, due dates, recurrence, and email reminders provide operational control.
- The action module creates a shared accountability layer across the platform.

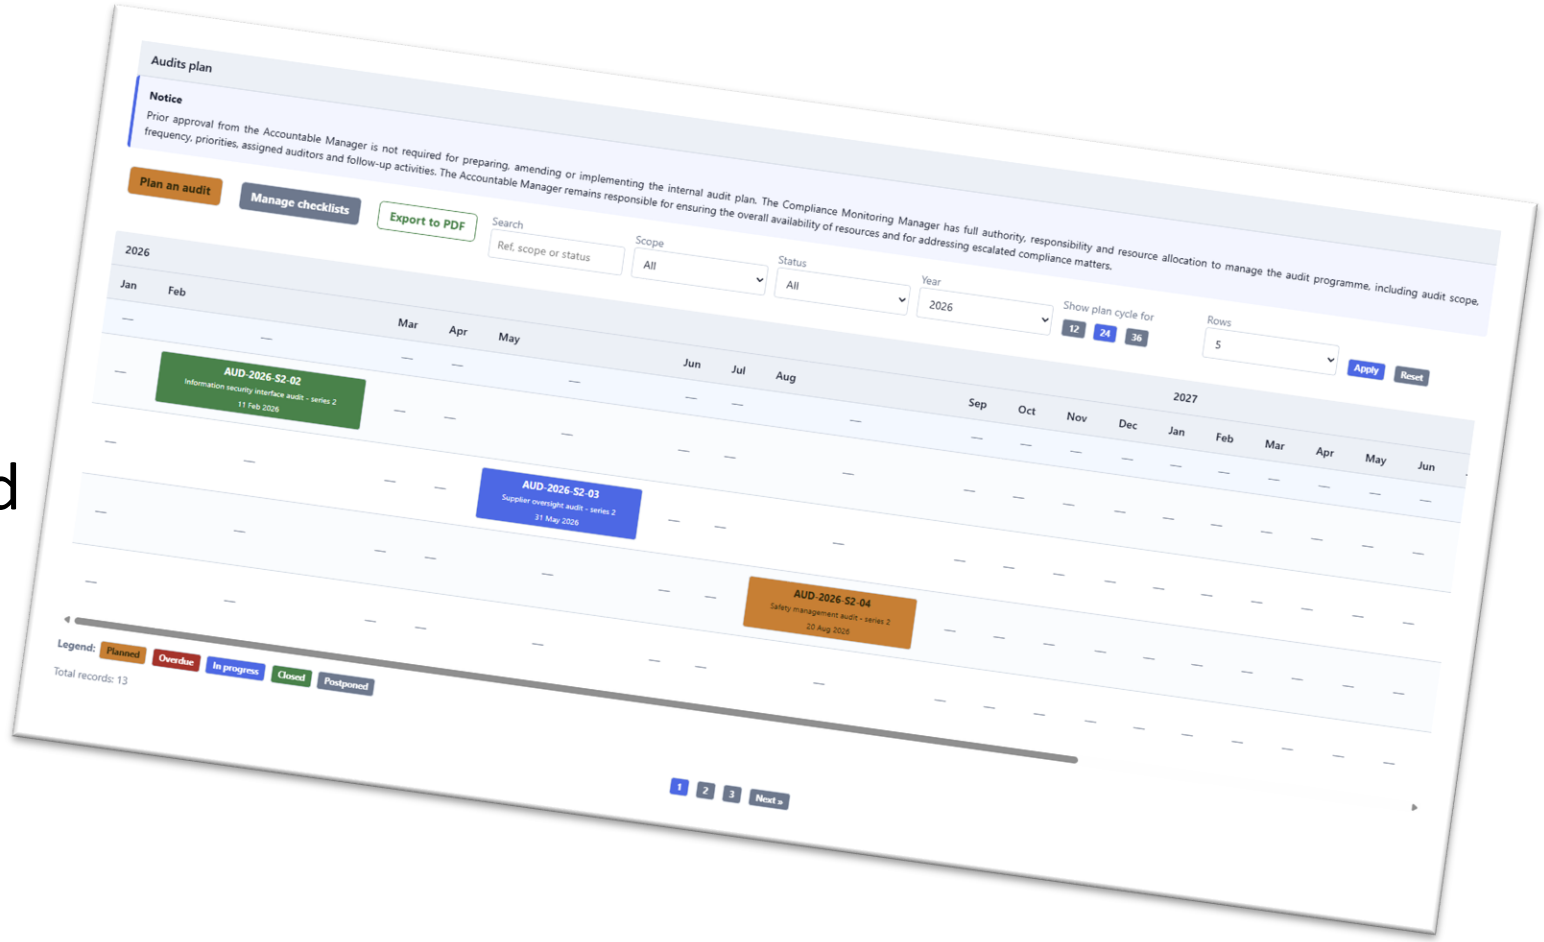
Compliance monitoring function

From audit planning to findings and workload control

- Multi-year audit planning supports structured oversight.
- Checklists can be prepared from regulations or procedures.
- Findings, root causes, and corrective/preventive actions are connected to follow-up management.



Compliance monitoring function

Safety reporting and safety risk management

Structured reporting linked to risk assessment and performance monitoring

- All users can report events or hazards.
- Designated analysts can evaluate reports and link resulting actions.
- Risk registers and indicators provide management visibility.

Information security risk management

Structured reporting linked to risk assessment and performance monitoring

- Information security reporting mirrors the safety workflow while addressing cyber-risk topics.
- Registers, matrices, and indicators provide structured oversight.
- The module can be positioned as a progressive adoption path where organizational maturity requires it.

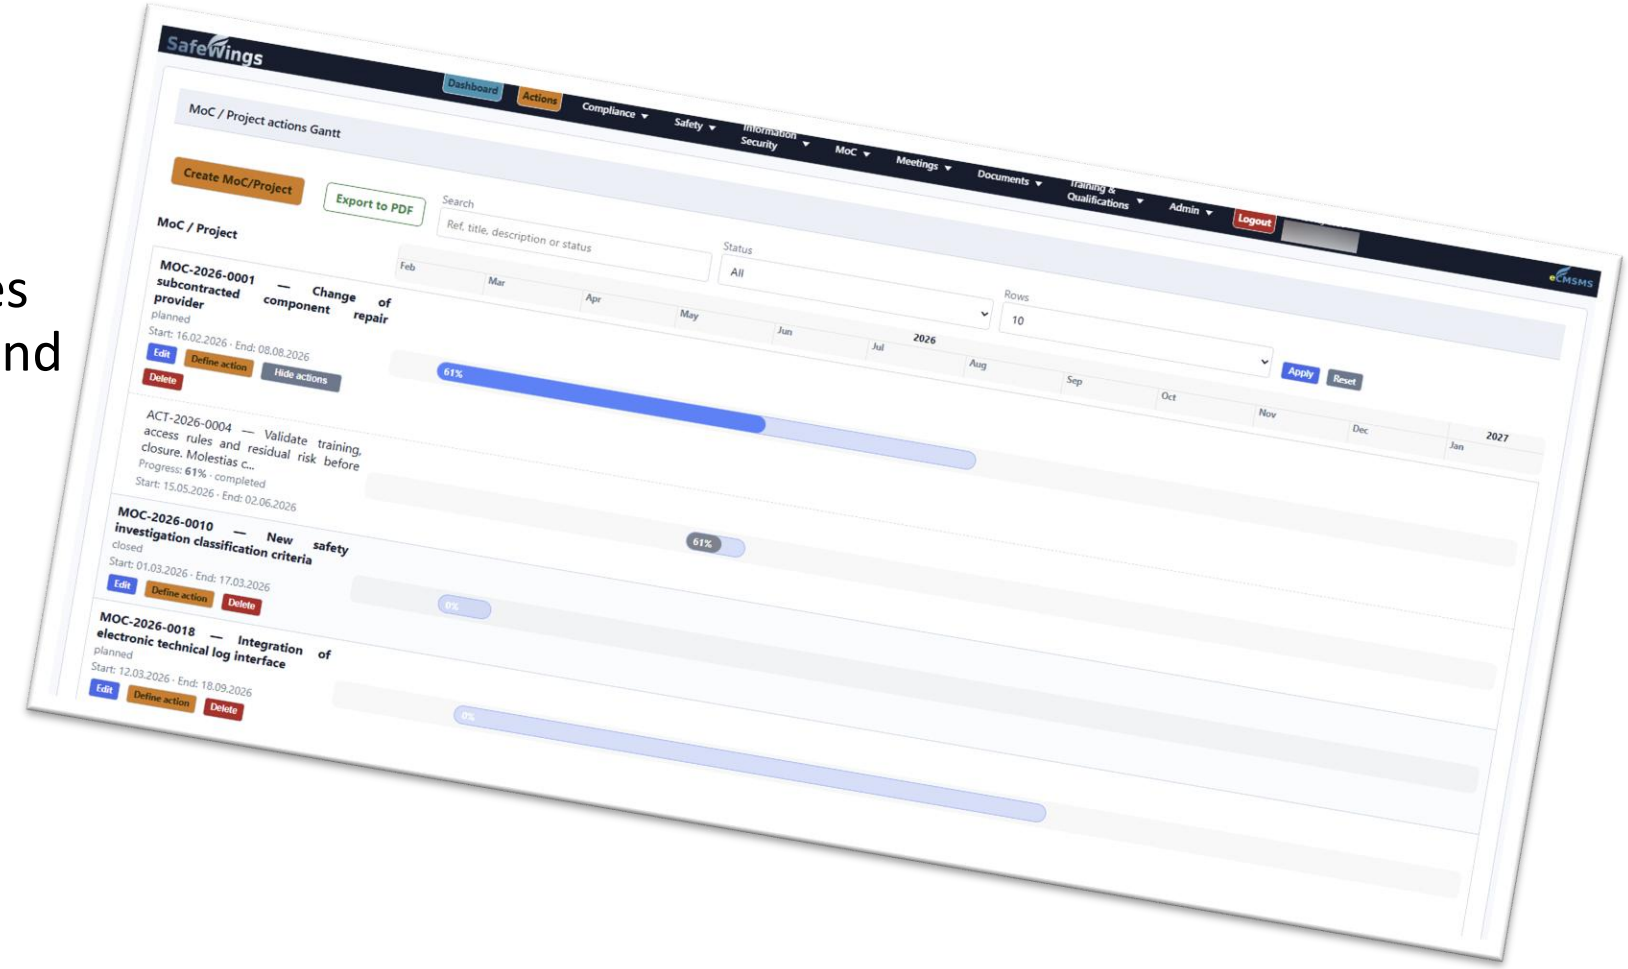
Management of change

Plan work, document decisions, and connect outcomes to actions

- Management of change gives visibility on active changes and linked workstreams.

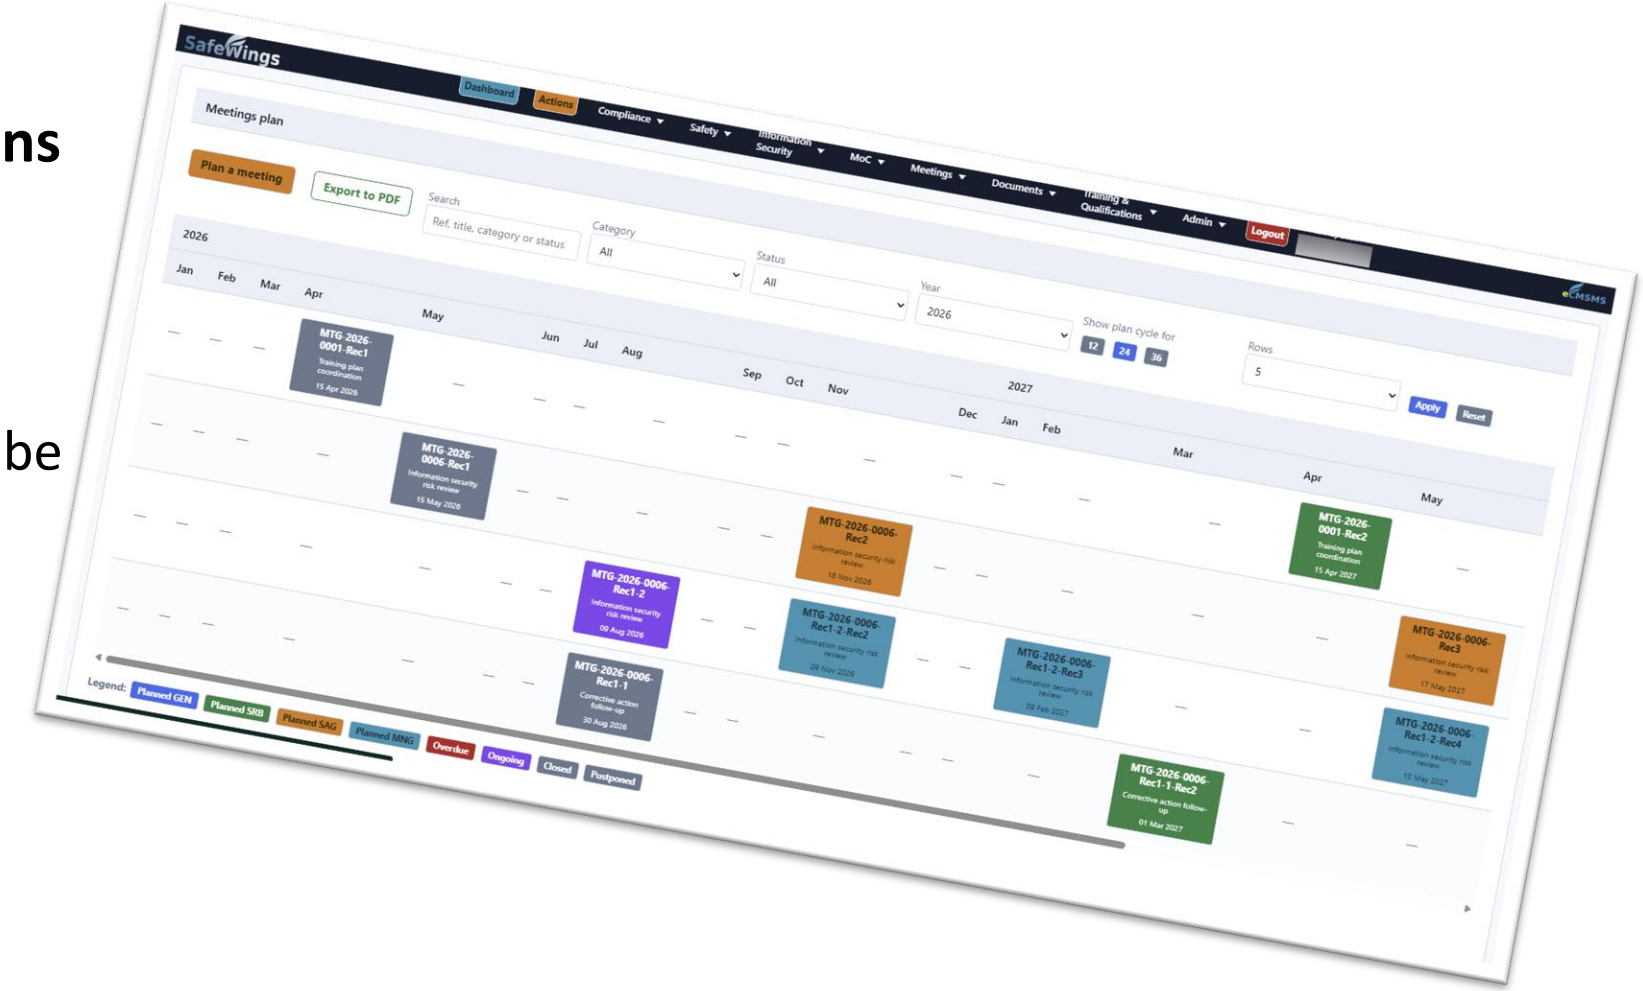


©eCMSMS by SafeWings Aviation Consulting

Meetings management

Plan meetings, document decisions, and define actions

- Meeting planning supports recurring and ad-hoc governance cycles.
- Minutes and outcomes can be translated into actions



Surveys

Collect structured feedback, monitor safety culture, and identify potential hazards or improvement areas before they develop into significant issues

- Create, distribute, and manage different types of surveys, such as safety surveys, compliance surveys, operational feedback questionnaires, and internal assessment forms.
- Questions can be tailored to the organization’s activities, procedures, departments, or specific operational risks.

Training and competence management

Records, learning delivery, progress tracking, and certificates

- Training records support qualification evidence and recurrent planning.
- The self-training platform enables online learning and examination workflows.
- Certificates can be generated in PDF format with unique registration numbers.

Document control

Distribute controlled information and record acknowledgement

- Documents can be managed and disseminated according to user roles.
- Read-and-understood acknowledgements can be recorded as evidence.
- Document trees support controlled organizational different areas.
